

Marine Geospatial Ecology Lab

*“Applications of optimization algorithms &
habitat models for
marine ecoregional
&
marine ecosystem-based management”*

Pat Halpin

Michael Coyne

NICHOLAS SCHOOL OF THE
ENVIRONMENT AND EARTH SCIENCES
DUKE UNIVERSITY

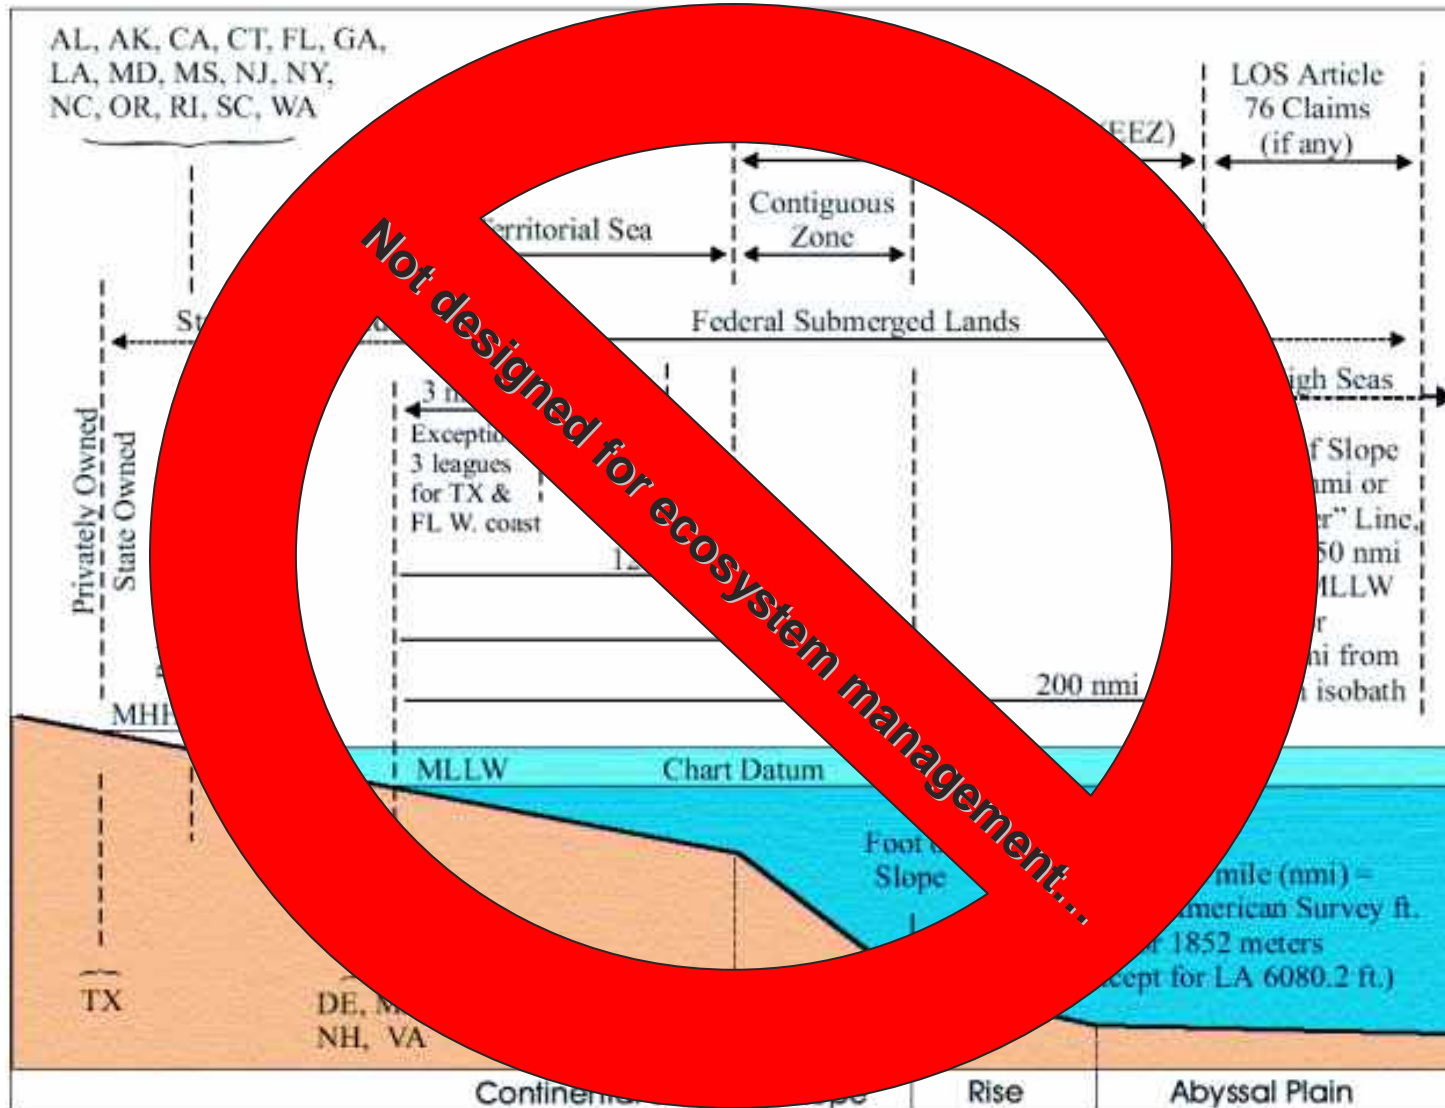

Marine Ecosystem-Based Management

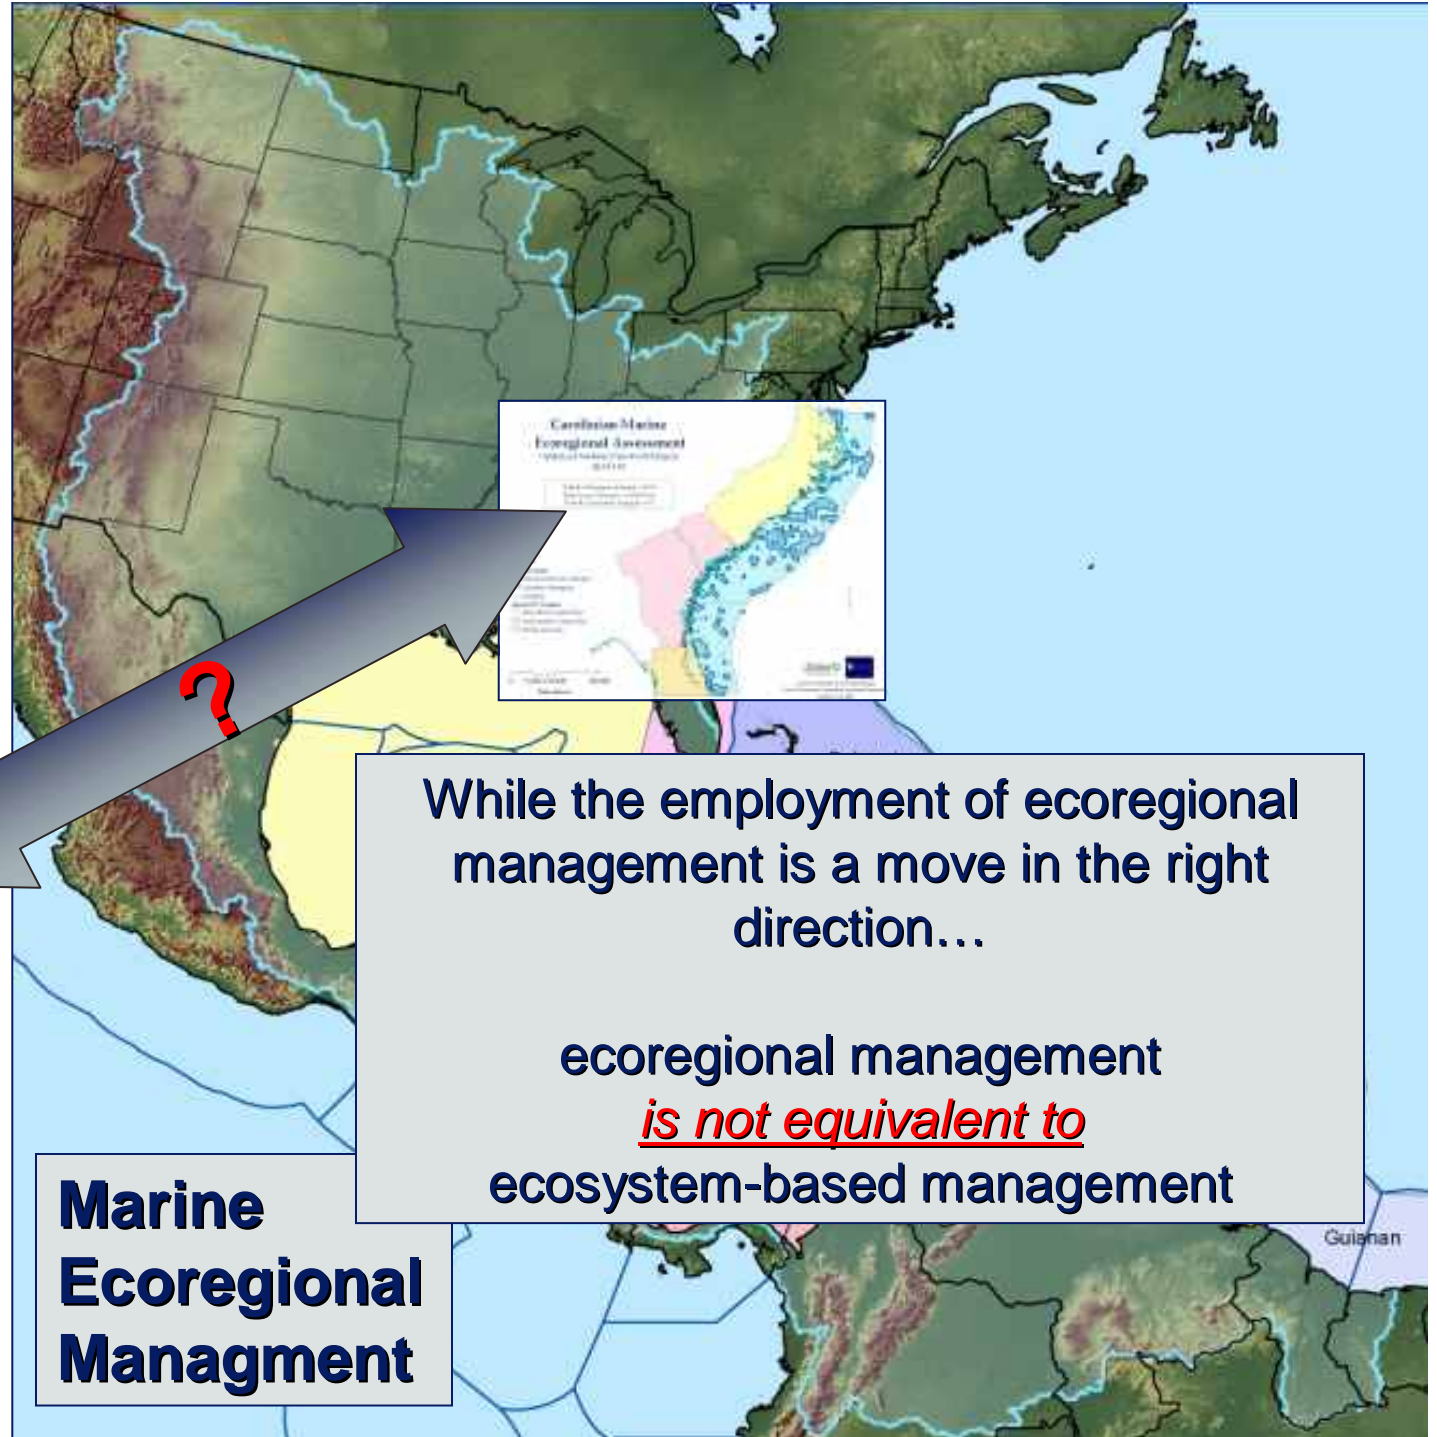

- Marine *ecoregional planning* is different from *ecosystem-based management*
- Habitats (benthic & pelagic) must be *defined by species use* not cover maps
- Marine-EBM will be analyzed & implemented through *models* so we need to be measuring, mapping and monitoring variables that will be useful for ecosystem models and *forecasting*.

Marine Ecosystem Management

Marine jurisdiction / management regions

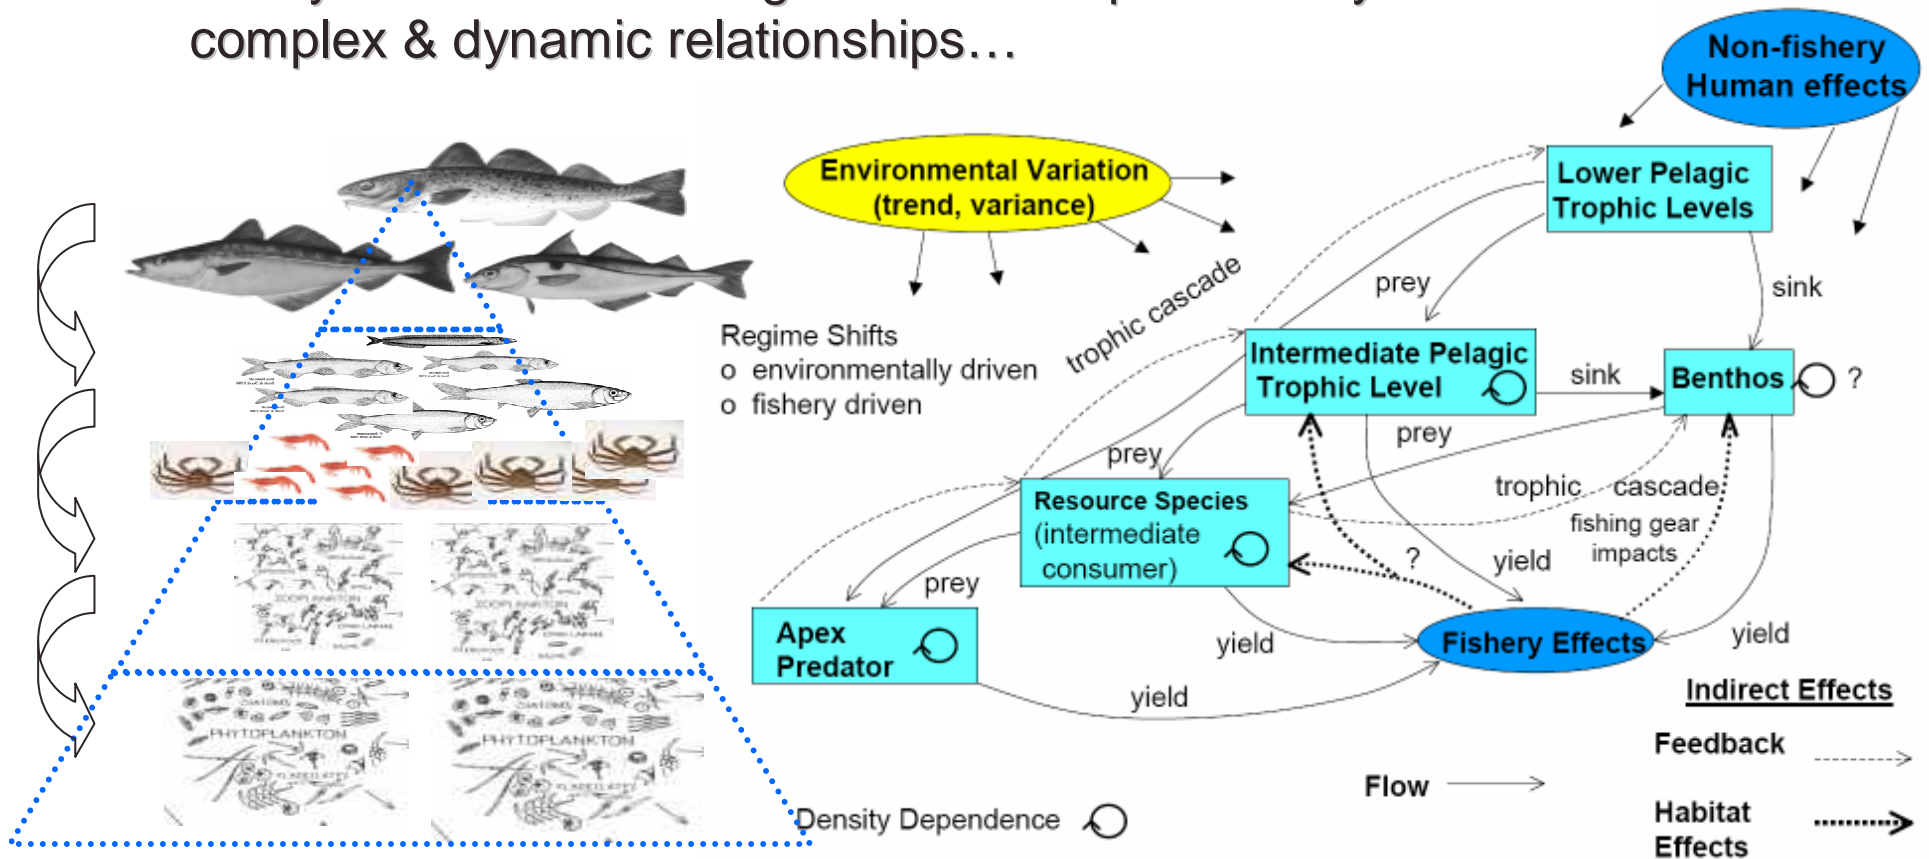

Marine Ecosystem-Based Management

Geospatial tools for ecosystem-based management

Ecosystem-based management will requires analysis of complex & dynamic relationships...

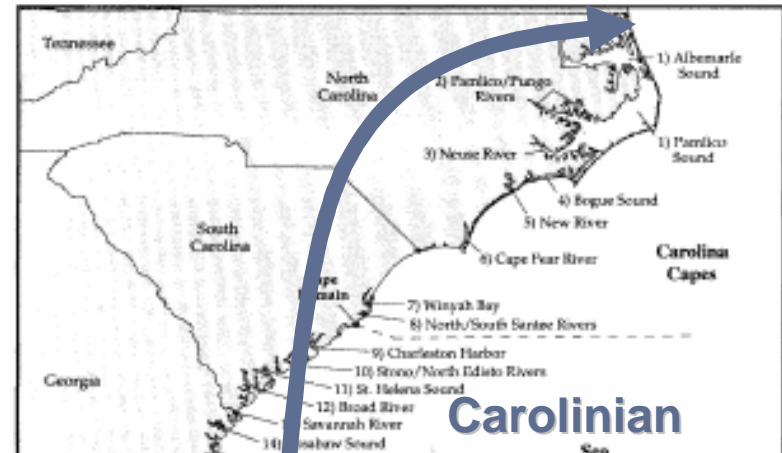

S. Murawski. 2004. *The challenge of Managing Marine Resources in 5 Dimensions. Workshop on GIS Tools Supporting Ecosystem Approaches to Management . NOAA-CSC.*

Marine Ecoregional Planning

The **Nicholas School** conducted the analysis for two recent marine ecoregional conservation planning projects

Dan Dorfman from the TNC Marine program will present this case study in detail tomorrow...

Marine ecoregional planning process:

GIS Data

Planning Units (Hexagons)

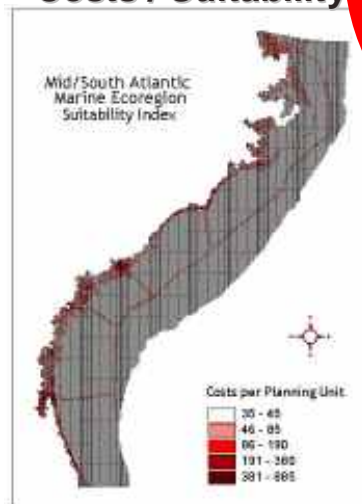

Coarse filter / fine filter targets

A screenshot of a software interface showing a table with columns for 'Coarse Filter' and 'Fine Filter' targets. The table lists various planning units and their corresponding target values.

Surrogate data

Costs / Suitability

Optimization (MARXAN)

Goals: (example 30% BLM 0.5)

Marine ecoregional plan

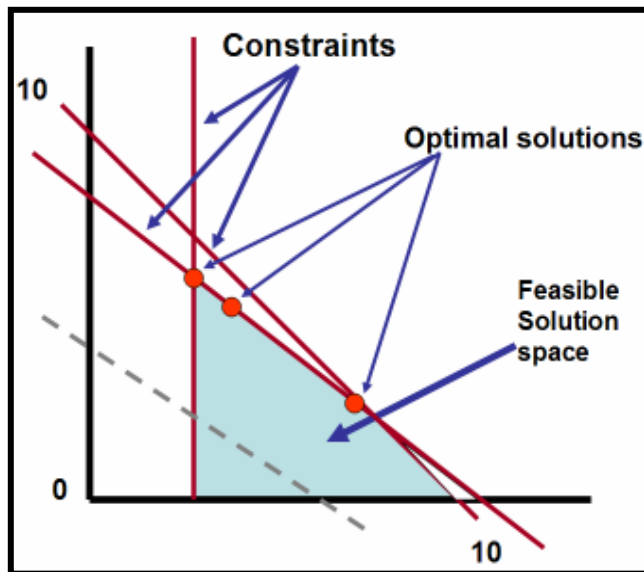

Marine Ecoregional Planning Process

Optimization programs designed to be used for spatially aggregating habitat patches for optimal coverage.

These methods are run iteratively until the computer converges on an optimal solution (~1,000,000 runs)....

Marine Ecoregional Planning Process

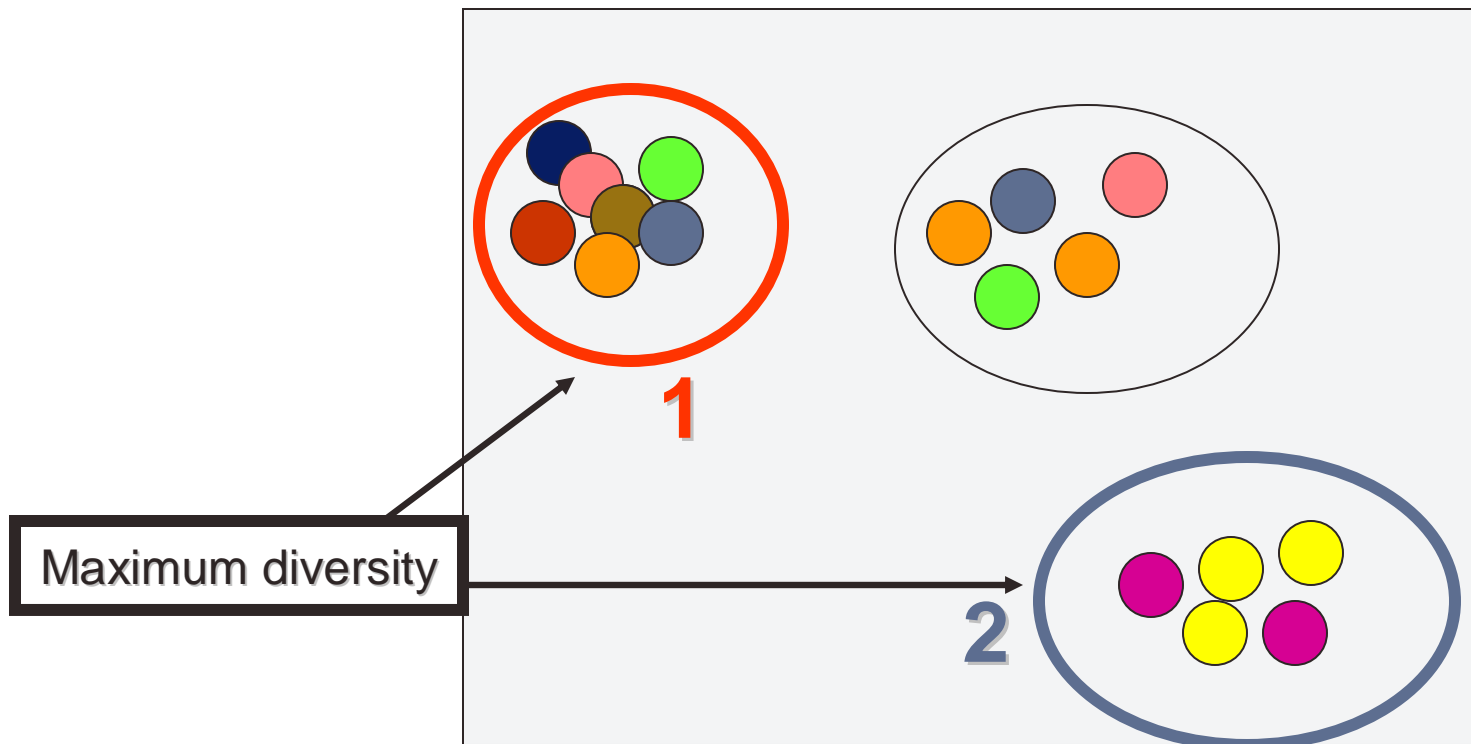

This algorithm relies on the goal of complementarity.

You select the site that gives you the most different species / targets...

Then the site that give you the most new (complementary) species / targets

And so on...

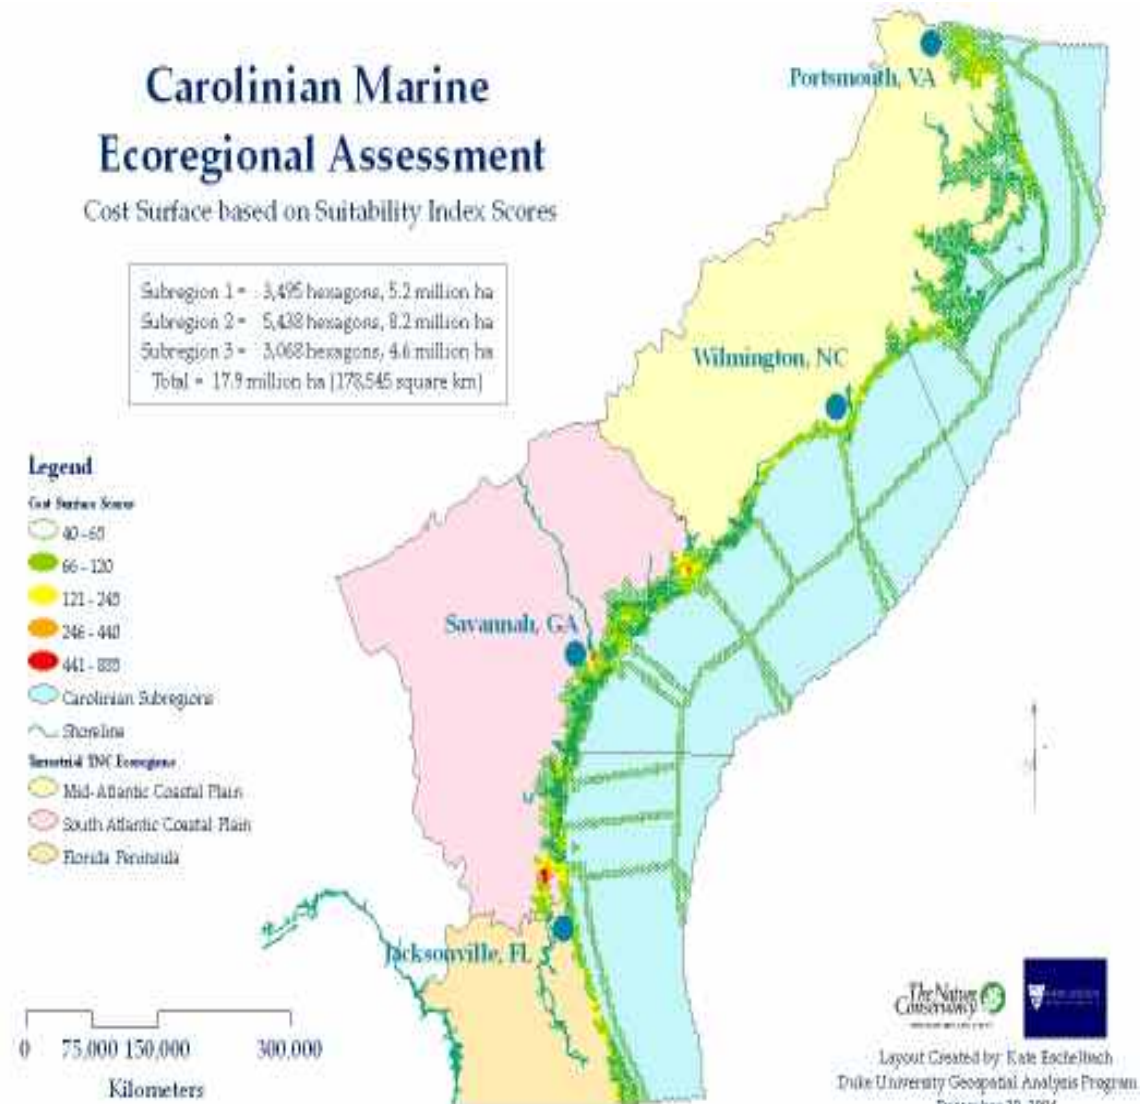

Carolinian Ecoregion: Targets

Fine and Coarse Filter Targets of the Carolinian Ecoregion			
<i>Fine Filter Target</i>	<i>Scientific Name</i>	<i>Coarse Filter Target</i>	<i>Coarse Filter Target</i>
American Oystercatcher	<i>Haematopus palliatus</i>	Benthic Complexity - Deep	Intertidal Scrub-Shrub
Black Crown Night Heron	<i>Nycticorax nycticorax</i>	Benthic Complexity - Shallow	Irregularly Flooded Salt and Brackish Marsh
Black Skimmer	<i>Rynchops niger</i>	Coarse Sand Beach	Mixed Sand and Gravel Beach
Common Tern	<i>Sterna hirundo</i>	Exposed Scarp with Clay	Regularly Flooded Salt Marsh
Green Heron	<i>Butorides virescens</i>	Exposed Tidal Flat	Salt Marsh w/Variable Flood Regimes
Little Blue Heron	<i>Egretta caerulea</i>	Fine Sand Beach	Shellfish Habitat
Piping Plover	<i>Charadrius melodus</i>	Forested Wetlands	Sheltered Tidal Flat
Reddish Egret	<i>Egretta rufescens</i>	Fresh Marsh	Sheltered Tidal Flat with Oysters
Wood Stork	<i>Mycteria americana</i>	Gravel and Shell Beach	Submerged Aquatic Vegetation
Yellow Crown Night Heron	<i>Nyctanassa violacea</i>	Hardbottom - Deep	Tidal Fresh Marsh
Right Whale Calving Ground	<i>Lissodelphis borealis</i>	Hardbottom - Shallow	
Shortnose Sturgeon Habitat	<i>Acipenser brevirostrum</i>	Habitat Area of Particular Concern	Habitat Area of Particular Concern
Sea Turtle Nesting Beaches	<i>C. mydas, D. coriacea, C. caretta</i>	(The Point, 10-Fathom Ledge and Big Rock)	(Charleston Bump Complex)
<i>Total Fine Filter Targets</i>	13	<i>Total Coarse Filter Targets</i>	23
		<i>Total Number of Targets</i>	36

Carolinian Ecoregion: Threats

- ▲ *Anthropogenic Threats*
 - ▲ *Mean population change between 90-00*
 - ▲ *Housing Density*
 - ▲ *Road Density*
 - ▲ *Major Ports and Shipping Lanes*
 - ▲ *Hardened Shorelines*
 - ▲ *NPDES permits*
 - ▲ *Dredged Shipping Chanr.*
 - ▲ *Superfund Sites*
 - ▲ *Offshore Dredge Sites*

Subregion stratification

Carolinian Marine Ecoregional Assessment

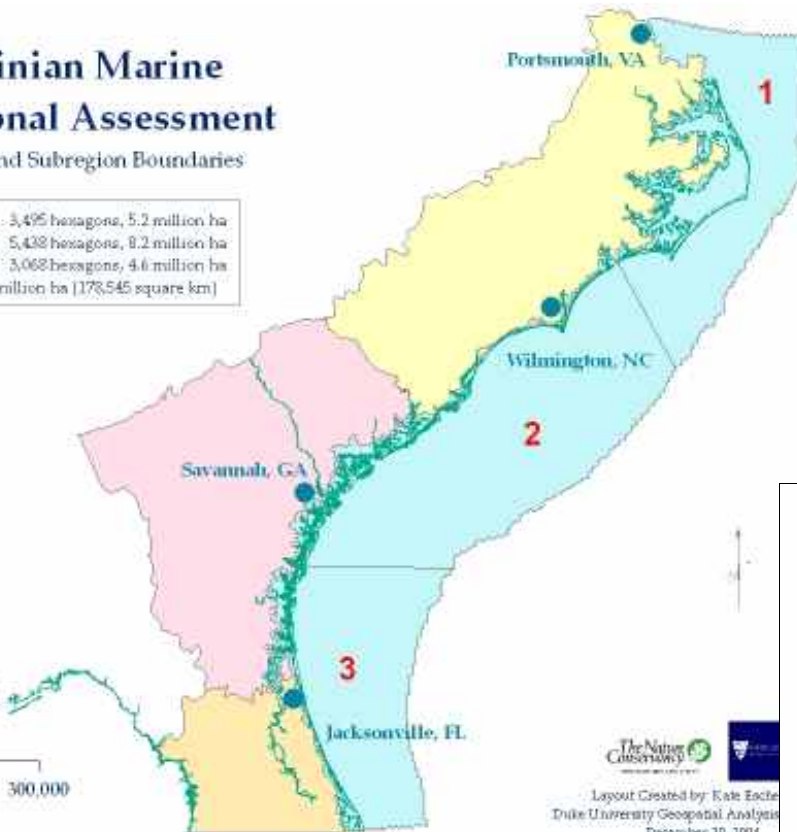

Ecoregion and Subregion Boundaries

Subregion 1 = 3,495 hexagons, 5.2 million ha
 Subregion 2 = 5,438 hexagons, 8.2 million ha
 Subregion 3 = 3,068 hexagons, 4.6 million ha
 Total = 17.9 million ha (178,545 square km)

Observations
Effort

Geospatial tools for M-EBM will need to be multi-dimensional...

**Dive Profiles:
~4D Data (X,Y,Z,T m...m)**

Geospatial tools for M-EBM will need to model time lags...

Spatio-Temporal Models

At large spatial scales:

Temporal lags

At finer spatial scales:

Bathymetric and water
temperature gradients

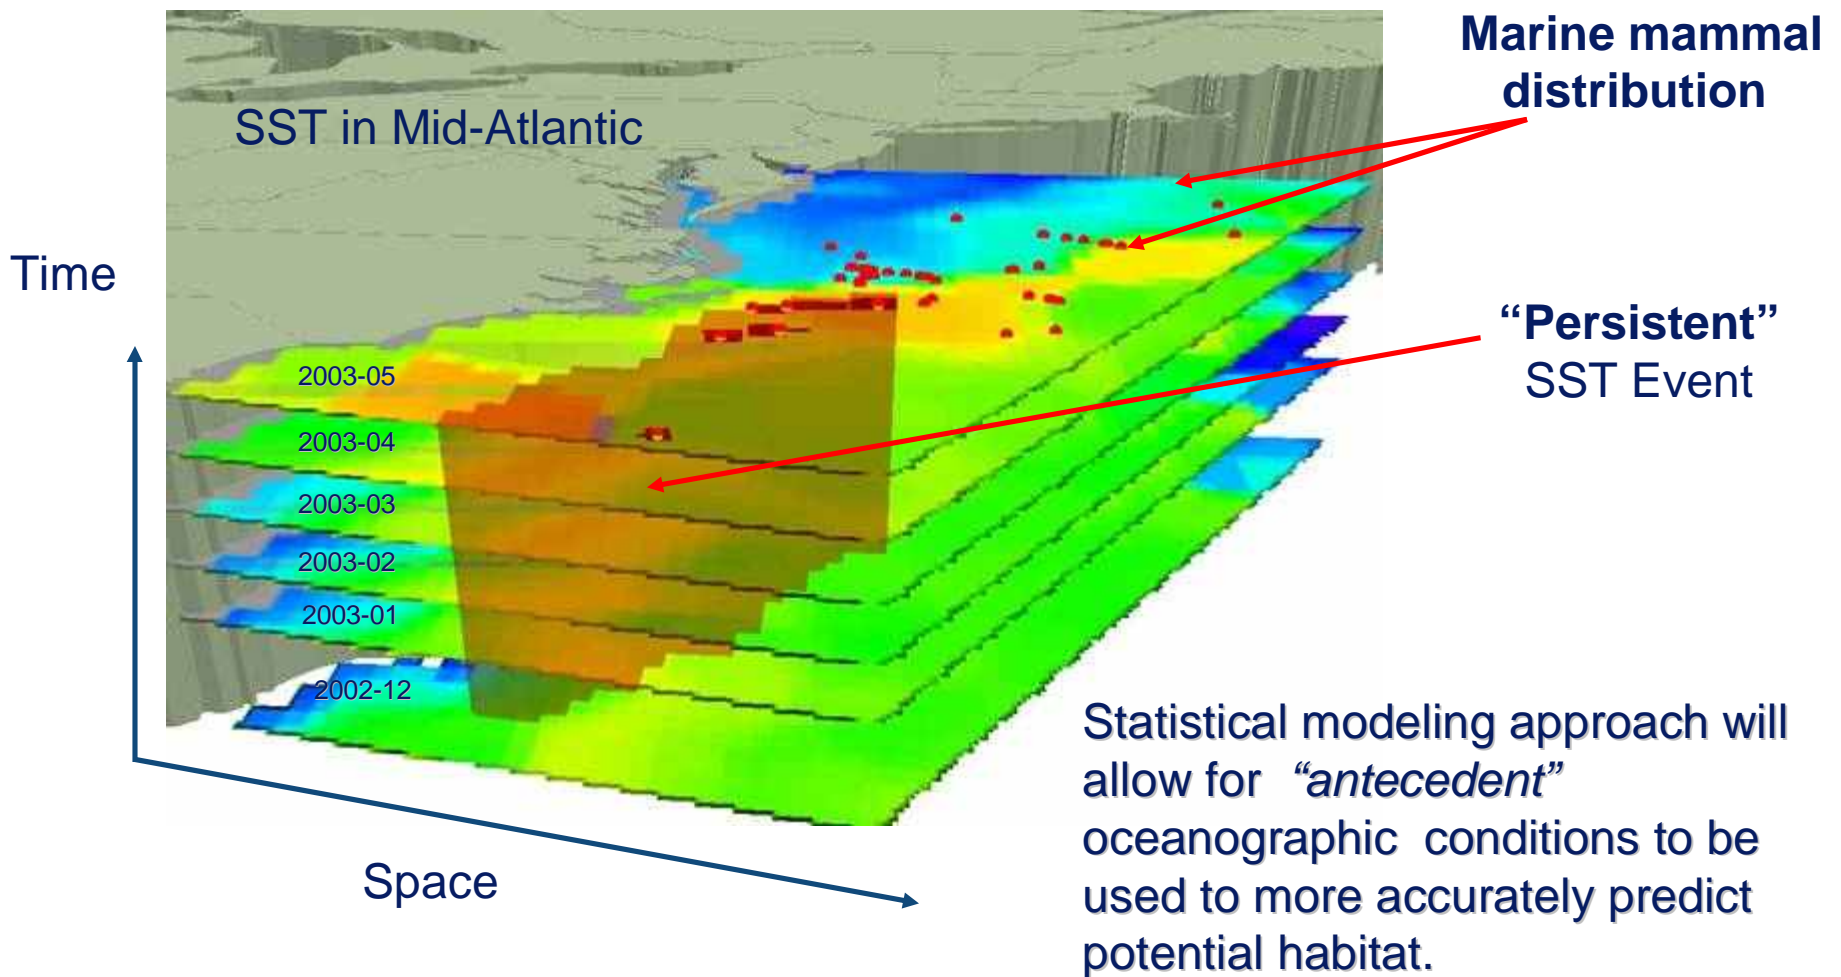

Prey
availability

Marine mammal
distribution

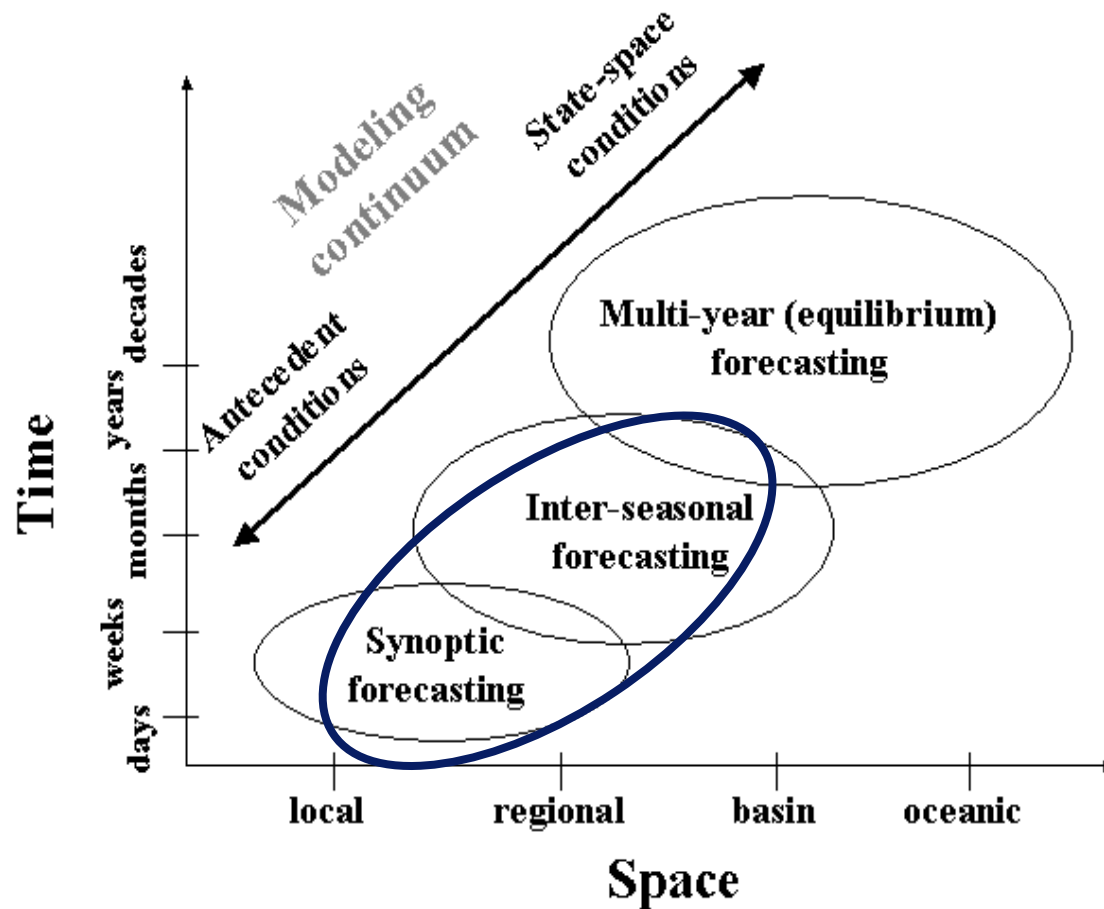

Geospatial tools for M-EBM will need to model events...

Spatio-Temporal Models

Geospatial tools for M-EBM will need to forecast...

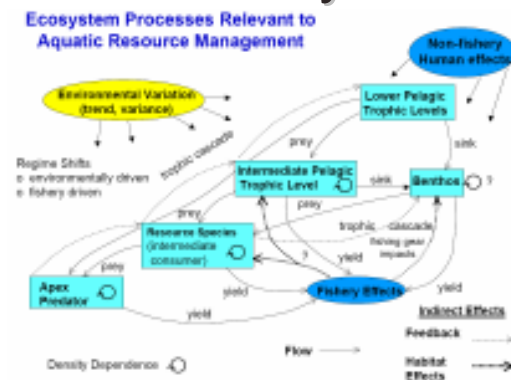

The emerging management applications are at these finer temporal scales...

Marine Ecosystem-Based Management

- Marine *ecoregional planning* is different from *ecosystem-based management*
- Habitats (benthic & pelagic) must be *defined by species use* not cover maps
- Marine-EBM will be analyzed & implemented through *models* so we need to be measuring, mapping and monitoring variables that will be useful for ecosystem models and *forecasting*.
